BEST IN THE WEST
Anderson made a quiet departure from Long Beach on 27 July 1970. A brief visit to Hawaii was the most exciting part of the transit to the Western Pacific. Floral specimens, red earth, and white sand beaches adorned the islands. After brief refueling stops in Midway and Guam, Anderson reached its home-away-from-home, Subic Bay, Republic of the Philippines. This was the first glimpse of the port to which the crew was to become most accustomed.

Upon leaving Subic Bay, the ship proceeded to the Gulf of Tonkin for a short line period with the attack carrier USS Bon Homme Richard. After completing plane guarding duties, Anderson accompanied Bon Homme Richard and USS Davidson (DE-1045) to Singapore. The British people were very congenial to their American cousins and many Anderson sailors took part in tours of the surrounding area. Singapore was indeed the first of many exciting stays in foreign lands.

Anderson sailed out of Singapore and then dipped just far south enough to arouse King Neptune from the deeps. During the traditional "crossing the equator ceremony," the pollywogs felt Neptune's wrath in more ways than one. It could be said that the episode was a spine tingling experience filled with gastronomic delights.

After a short three day period for replenishment in Subic Bay, the next assignment found the ship southwestward bound for the Gulf of Siam, where for the next three weeks over 1400 rounds of 5 inch/38 caliber ammunition were fired by the ship's guns in support of the 21st ARVN Division's operations in the U Minh forest area of South Vietnam.

On completion of the Naval Gunfire Support assignment, Anderson joined the attack carrier USS Oriskany for a transit to Yokosuka, Japan. Along the way a young lady, with the unlikely name of Joan, kicked up her heels and played havoc with the men of DD-786. She was indeed an unwelcomed passenger.
Although a little green around the gills, everyone survived and arrival in Yokosuka on 19 October was a welcome. The cool weather was a pleasant relief from the sultry days spent in the Gulf of Siam. This area of Japan was very exciting and filled with many beautiful sights such as castles, hot springs, and Mount Fuji. A few Anderson sailors made trips to nearby Yokohama and Tokyo. The ship became well-laden with many purchases but, none-the-less departed Yokosuka and headed for the Gulf of Tonkin. An engineering casualty enroute required that the ship return to Japan for repairs, this time to Sasebo. After a pleasurable five day repair period, Anderson once again set forth for the South China Sea via the Taiwan Straits.

Plane guarding was the assignment for most of the next few weeks, but Anderson was called upon to go further north in the Gulf of Tonkin as an escort for USS Chicago (CG-11) for several days. After a trip to Subic Bay for a week of upkeep, the ship returned to plane guarding duty, this time with the USS Ranger.

Prior to Christmas, the ship left station for Keelung, Taiwan. Keelung is the port city for Taipei, the capital of Taiwan. Shopping and sightseeing filled the six days in this port. Anderson departed Keelung on 21 December for Subic Bay where the entire crew celebrated Christmas and New Year's while the ship was in drydock for repairs.

The final assignment was as escort for USS Gridley (DLG-21) on SAR (Search and Rescue) station in the Gulf of Tonkin. The ship spent an uneventful week on station and then headed for Hong Kong. Hong Kong had so many things to offer; great food, sightseeing, and, of course, shopping. Many Anderson sailors increased the size of their wardrobes with Mod fashions available. Hong Kong was undoubtedly one of the favorite ports visited by the ship.

A return trip to Subic Bay provided an opportunity for repairs prior to the homeward transit. Brief refueling stops in Guam, Midway, and Pearl Harbor were made enroute to San Diego and Anderson arrived for a gala homecoming on 11 February 1971.
Vital communications keep the Captain informed.

The Captain surveys the situation.

**COMMANDING OFFICER**

Commander Herbert F. Nelson was commissioned as Ensign USN upon graduation from the University of Mississippi in 1953. His previous assignments include duty aboard USS Mississippi (EAG-128); Recruit Training Command, Great Lakes, Illinois; USS Savage (DER-328); Staff, COMCORTRON SEVEN; Staff CINCPACFLT; Staff, COMDESRON SEVEN; Naval Post Graduate School, Monterey, California; and Fleet Training Group, PearlHarbor, Hawaii. He reported aboard having completed a tour of duty as Executive Officer, USS Wainwright (DLG-28).

Commander and Mrs. Nelson, the former Pauline Galley of Waukegan, Illinois, reside with their two children in Chula Vista, California.
The XO takes the conn.

**EXECUTIVE OFFICER**

Lcdr Monteath came to Anderson after a tour at the Fleet Numerical Weather Central in Monterey, California. Prior to that he had seen tours on USS Carromade (IFS-1), USS Vesuvius (AE-15), USS Dale (DLG-19), and USS Berkeley (DDG-15). He graduated from Vanderbilt University in 1958 and attended the US Naval Post Graduate School from 1963 to 1965 earning a Master of Science degree in Oceanography. Lcdr Monteath is married to the former Kay Butler of Memphis, Tennessee. They have two children and reside in Chula Vista, California.

"Where is Sam?"

The "Old Salt".
OPERATIONS
The Operations Department is the eyes, ears and the brains of the ship. Information received in radio and on the signal bridge is funneled into CIC (Combat Information Center) where it is displayed, interpreted, and evaluated. Having been processed, this information in turn is passed to the bridge so that the Command can make its decisions. The signal bridge is truly the eyes of the ship. Signalmen by means of flashing light, flag hoist, semaphore and Nancy gear keep constant and alert visual communications with ships in company.

Radio, in turn, is the ears of the ship. Messages are sent and received via radio-telegraphy, radio-teletype and radio-telephone.

Yet Radio and Combat both would not be able to perform their jobs if the various radar and communications equipment were not operative. The electronics technicians therefore, are an integral part of the operations team.

However, let us not forgo the ship's offices with their yeomen who handle most of the administrative work of the ship. They ensure a smooth and efficient turnout of reports and logs. A good yeoman crew is highly necessary to the efficiency and morale of the department and the ship.

The medical representative, usually an able and experienced hospital corpsman, keeps a close eye on the health of the crew, which is always an important factor.

The postal clerk offers another important service to the ship—the daily supply of mail and packages, which also assists in keeping up the ship's morale.
The XO is also the Navigator.

ENGINEERING
The duties of the Engineering Officer and his department cover a wide field. Unless a successful and efficient plant is operated, the ship will not steam properly and many of her necessary pieces of equipment will not be put to use. Basically, the department is responsible for the operation, care, and maintenance of all propulsion and auxiliary machinery and for the control of damage. Some of the specific duties of the department are:

1. The operation and maintenance of all piping systems, and all electronic and electric devices not specifically assigned to other departments.
2. Damage control.
3. The repair of the hull and its fittings.
4. The operation and care of all boat machinery.
5. The maintenance of the engineering log and the engineer's bell book.

It is clear that this department has a very important part in keeping the ship in operating condition. The efforts of the "Snipes" are greatly appreciated.

WEAPONS
WEAPONS OFFICER

The main function of the Weapons Department is to maintain a condition of complete material and battle readiness of all weapons systems, ordnance, fire control, and deck and hull equipment.

AS Division consists of the ASROC Gunners Mates, who maintain and operate the ASROC system; Torpedoman, who maintain the torpedoes; and the Sonarmen, who work on the sonar and its associated equipment.

G Division has two groups of personnel: the Gunners Mates, who keep all the gunnery systems operative, and the Fire Controlmen, who maintain and operate the Fire Control Radar, Director, Computer, and related equipment.

1st Division, the 'deck force,' has among its responsibilities the maintenance of all weather decks and the ship's exterior hull, the Captain's gig, main deck interior passageways, the issuing of all general consumable stores, and fuel.

SUPPLY
The Supply Department, under the vigilant eye of the Supply Officer is responsible for procuring, receiving, storing, issuing, shipping, transferring, selling, accounting for, and maintaining stores equipment. Specifically, the duties of the Supply Officer are:

1. Receiving, delivering, and shipping authorized baggage, medical and dental supplies and equipment.
2. Inspecting material received under orders and contracts calling for inspection on delivery.
3. Operating:
   A. The general mess, including the preparation and service of food.
   B. The ship's store, laundry, and barber shop.
4. Disbursing government funds; but when there is an assistant for disbursing, he relieves the Supply Officer for the responsibility for procurement, custody, transfer, issue, and accounting of funds.
5. Coordinating the annual inventory of equipment including repair parts, in the custody of the several heads of departments.

So, you can easily see the momentous job carried out by this department. It is to the "Supply Boys" that we owe our gedunk, good chow, and spares.
