5. Mr. Kinnon was assigned to remove the return steam manifold from the makeup evaporator. As the process of lowering the union type connections, he placed the first on top of the floor plate which was mounted on top of the original floor plate. Boundary bar, as per the statement made in Item 2, from E4-1.

This triangular floor plate was mounted and guarded with a guard, to keep for the purpose of gauge between the Triplex Main Pipe Feud Pumps and Makeup Pump. However, when this was accomplished, the boundary bar was not installed.

6. Boundary bar being installed this date.
